

INTERVIEW VASILIS KOURBETIS (K Milios and SIA OE, GR)

I am involved in Educational Activities for many years and the last two decades as University professor.

My University Students are mainly future teachers of young persons with special needs and especially with hearing difficulties and deaf.

One of the main subjects of teaching is the Sign Language and the Teaching methodology of it.

There is a National Sign language for each Country, there is also the International Sign Language but the teaching methodology is mainly the same

Very often we have in front of us a multicultural and multilingual group of learners and is a challenge for the teachers to approach them getting more experience

I discover more and more new ways for teaching them studying the international bibliography. I was not lucky because this project came in to our lives just now. It could offer to us so many good ideas and could help up to make better our teaching to multinational groups and I am going to use the outcomes and the results of the project during its pilot period and after its lifetime.

I was not involved in teaching until today migrants or refugees with hearing difficulties but if I will have in the future such an opportunity I will try it and I am sure it will be a new challenge for me.

Last but not least, in the near future I will start collaborating again with DIAN for a new EU project, so I will be closer to the implementation of the INCREASE Project
